## CLI Asterisk : forcer le raccroché d'un appel

```
channel request hangup PJSIP/ID_CHANNEL
```

## CLI Asterisk : analyser le comportement d'un dialplan vu par asterisk

```
xivo*CLI> dialplan show pre-mobility
[ Context 'pre-mobility' created by 'pbx_config' ]
's' =>      1. NoOp() [example.conf:15]
           2. GotoIf(${XIVO_MOBILEPHONENUMBER}?:return) [example.conf:16]
           3. NoOp(Mobile Phone : ${XIVO_MOBILEPHONENUMBER}) [example.conf:17]
           4. Set(XIVO_INTERFACE=${XIVO_INTERFACE}&Local/${XIVO_MOBILEPHONENUMBER}@default) [example.conf:18]
[return] 5. Return() [example.conf:19]

-- 1 extension (5 priorities) in 1 context. --
```

## CLI Asterisk : vérifier l'état des cartes RNIS

```
dahdi show status
```

```
Description           Alarms  IRQ    bpviol CRC    Fra Codi Options  LBO
T2XXP (PCI) Card 0 Span 1  OK      1      0      0      CCS HDB3          0 db (CSU)/0-133 feet (DSX-1)
T2XXP (PCI) Card 0 Span 2  OK      1      0      0      CCS HDB3          0 db (CSU)/0-133 feet (DSX-1)
```

## CLI Asterisk : activer le debug SIP

```
xivo*CLI> pjsip set logger verbose
Usage: pjsip set logger {on|off|host <name/subnet>|add <name/subnet>|method <method>|methodadd <method>|verbose
<on/off>|pcap <filename>}
    Enables or disabling logging of SIP packets
    read on ports bound to PJSIP transports either
    globally or enables logging for an individual
    host or particular SIP method(s).
    Messages can be filtered by SIP request methods
    INVITE, CANCEL, ACK, BYE, REGISTER, OPTIONS,
    SUBSCRIBE, NOTIFY, PUBLISH, INFO, and MESSAGE
```
